# BRAND VISION

THERE IS AN ATHLETE IN ALL OF US, THERE ARE NO BIG ONES OR SMALL ONES OR PROFESSIONAL ONES.

AN ATHLETE IS AN INDIVIDUAL WHO ACCEPTS THAT THERE IS NO FINISH LINE, AND THAT THE PURSUIT OF EXCELLENCE IS FOREVER.

RECOVERY IS A KEY THAT HELPS YOU STAY ON YOUR TRUE PATH AND NOT WATCH FROM THE SIDELINES.

1. **Temperature Range**: Adjustable from 5°C to 39°C.
2. **Capacity**: 480 liters, fits two users.
3. **Material**: High-grade reinforced rubber with 8cm of thick air gap insulation. Double thermal insulated lid with additional fabric cover.
4. **Dimensions**: 90 cm (H) x 100 cm (D)
5. **Portability**: High-pressure 8 PSI structure, includes carry bag.
6. **Water Treatment**: UVC, Ozone.
7. **Filtration:** 1 Large sediment filter, 1 particle steel mesh filter
8. **Control System**: Touchscreen console with temperature control. 16A Plug.
9. **Pump**: Self-priming circulation pump.
10. **Safety**: Safety shutoff included.
11. **Accessories**: Tub, carry bag, pump, pipes, filters, and manuals.

**MRP**: 3,19,000 INR

# COLD RUSH™ Mi

1. **Temperature Range**: Adjustable down to 5°C.
2. **Tub Dimensions**: 82 cm Height x 93 cm Diameter.
3. **Capacity**: 550 liters, fits users up to 6'7"
4. **Portability**: Compact design for easy placement.
5. **Water Treatment**: Ozone and UV filtration system.
6. **Control System**: Streamlined console for precise adjustments.
7. **Pump**: Operates on 200V-240V, 60 Hz, 15/16A power supply.
8. **Safety**: Built-in safety shutoff.
9. **Accessories**: Tub, power cable, filtration system, and user manual.

**MRP**: 1,99,000 INR

# COLD RUSH™ ELITE

ARC ATHLETE RECOVERY

1. **Temperature Range**: Adjustable down to 5°C.
2. **Tub Dimensions**: 75 cm (Height) x 80 cm (Diameter)
3. **Capacity**: 270 liters, fits users up to 6'7"
4. **Portability**: Compact design for easy placement.
5. **Water Treatment**: Ozone and UV filtration system.
6. **Control System**: Streamlined console for precise adjustments.
7. **Pump**: Operates on 200V-240V, 60 Hz, 15/16A power supply.
8. **Safety**: Built-in safety shutoff.
9. **Accessories**: Anti weather cover and additional lid cover, hand pump, drain hose, anti-skid mat, power cable, filtration system, and user manual

**MRP**: 1,49,000 INR

# COLD RUSH™ 2.0

1. **Dimensions**: 80 cm diameter, 75 cm height.
2. **Capacity**: 300 liters, fits users up to 6'7".
3. **Material**: Polyester, nylon, pearl cotton, PVC coating.
4. **Weight**: 3.5 kg (empty).
5. **Temperature**: Handles water up to 50°C.
6. **Support**: Six durable support legs.
7. **Portability**: Includes a carry bag.
8. **Accessories**: Inflatable ring, lid, cover, hand pump, drain hose, anti-skid mat, pillow, and manual.

**MRP**: 16,999 INR

# COLD RUSH™ LITE

1. **Dimensions**: 70 cm diameter, 75 cm height.
2. **Capacity**: 270 liters, fits up to 6'2".
3. **Weight**: 3.5 kg (empty).
4. **Material**: Polyester, nylon, PVC coating.
5. **Temperature**: Supports water up to 50°C.
6. **Support**: 6 legs for stability.
7. **Accessories**: Inflatable ring, lid, pump, drain hose, pillow, manual.
8. **Setup**: Easy assembly with pump and legs.
9. **Drainage**: External tap with hose.

**MRP**: 11,999 INR

# Frequently Asked Questions

## AUTOMATIC ICE BATH RANGE

### How long does it take to reach 5°C from ambient temperature?

The system cools water to 5°C efficiently, typically within 4-6 hours depending on ambient temperature and initial water conditions. This ensures it's ready for use in scheduled recovery sessions without excessive wait times.

### How capable is the touchscreen console and what does it control?

The touchscreen console is designed for ease, speed, and precision, allowing full control over water temperature (5°C to 39°C) with real-time display and digital feedback. The responsive interface ensures quick adjustments with minimal training required.

### Can this operate in hot, humid, or outdoor environments?

The structure and electronics are insulated and weather-tolerant. The reinforced rubber body with thick air-gap insulation and dual-lid design ensures consistent performance in both hot and humid conditions, whether placed indoors or outdoors.

### How is hygiene maintained between multiple users in a day?

Continuous circulation through dual filtration (sediment + steel mesh) and integrated UVC/ozone disinfection ensures water remains clean and safe throughout the day. Routine maintenance and simple filter rinsing are sufficient to maintain high hygiene standards, even with high-frequency usage.

### Is the setup plug-and-play?

Yes. The unit is fully self-contained and does not require external plumbing or professional installation. Assembly involves attaching included hoses, plugging in the system, and filling the tub, making it operational within 30 minutes.

# Frequently Asked Questions

## PORTABLE ICE BATH RANGE

### Will the material hold up over time without leaking, warping, or tearing?

Yes. Both models use multi-layered construction: polyester, nylon, and pearl cotton with a waterproof PVC coating, engineered to withstand daily folding, heavy water pressure, and exposure to extreme temperatures. Welded seams and reinforced support rings reduce risk of wear and leakage.

### How stable is the tub when fully filled, can it tip or collapse?

Both portable models feature six reinforced support legs and a high-strength inflatable ring for structure. When set up on a level surface, the base remains completely stable, even during entry/exit or when leaning on the walls.

### How long does it take to set up and fill? Is any help needed?

Setup takes approximately 5–10 minutes solo. The included hand pump inflates the top ring, and the legs slide into designated sleeves with no tools required. Filling time depends on water source flow, typically 10–15 minutes with a standard hose.

### Is there a significant difference between the Cold Rush 2.0 and Lite models?

The Cold Rush 2.0 is 10cm wider in diameter and better suited for users over 6’2” or those who prefer a bit more space. It also includes a protective cover and anti-skid mat, whereas the Lite model is more streamlined for compact use.

### Is this product truly portable without compromising quality?

Both versions weigh just 3.5 kg empty and pack into a carry bag that fits in a car trunk or closet. Despite being lightweight, the design rivals permanent tubs in functionality and durability — making it ideal for both at-home recovery and travel setups.

SURGE
REGENERATION

# HARNESS THE POWER OF LIGHT

SURGE REGENERATION

Light absorption in red light therapy (RLT) involves exposing the skin to low levels of red or near-infrared light, which penetrates the skin and is absorbed by cells.

Red light typically uses wavelengths between 620 nm and 750 nm, penetrating the skin’s surface, while near-infrared light uses wavelengths between 750 nm and 1200 nm, reaching deeper tissues such as muscles, joints, and bones.

This light energy is primarily absorbed by the mitochondria, enhancing their ability to produce adenosine triphosphate (ATP), the cell's energy currency.

Increased ATP production improves cellular function and repair, leading to various therapeutic effects.

# Frequently Asked Questions

## RED LIGHT THERAPY PANELS

### What are the actual affects of red light therapy?

Red light therapy targets skin-level tissues to support collagen production, skin clarity, and inflammation reduction. It also penetrates deeper, aiding muscle recovery, joint health, and cellular regeneration.

### Is any maintenance required over time?

The device is virtually maintenance-free. Simply wipe the surface clean between uses with a non-abrasive cloth. Fans are dust-resistant, and no internal servicing is needed under normal usage conditions.

### How hot does the panel get during use? Is there any risk of overheating?

The panel runs cool thanks to high-efficiency internal fans. While the light itself emits therapeutic heat, the panel body remains touch-safe and does not heat the room. Auto-regulated cooling prevents overheating during back-to-back sessions.

### How much noise do the fans make during operation?

The Internal fans are engineered for silent operation. Noise level remains minimal (below 45 dB), preserving the relaxing ambiance of any wellness environment.

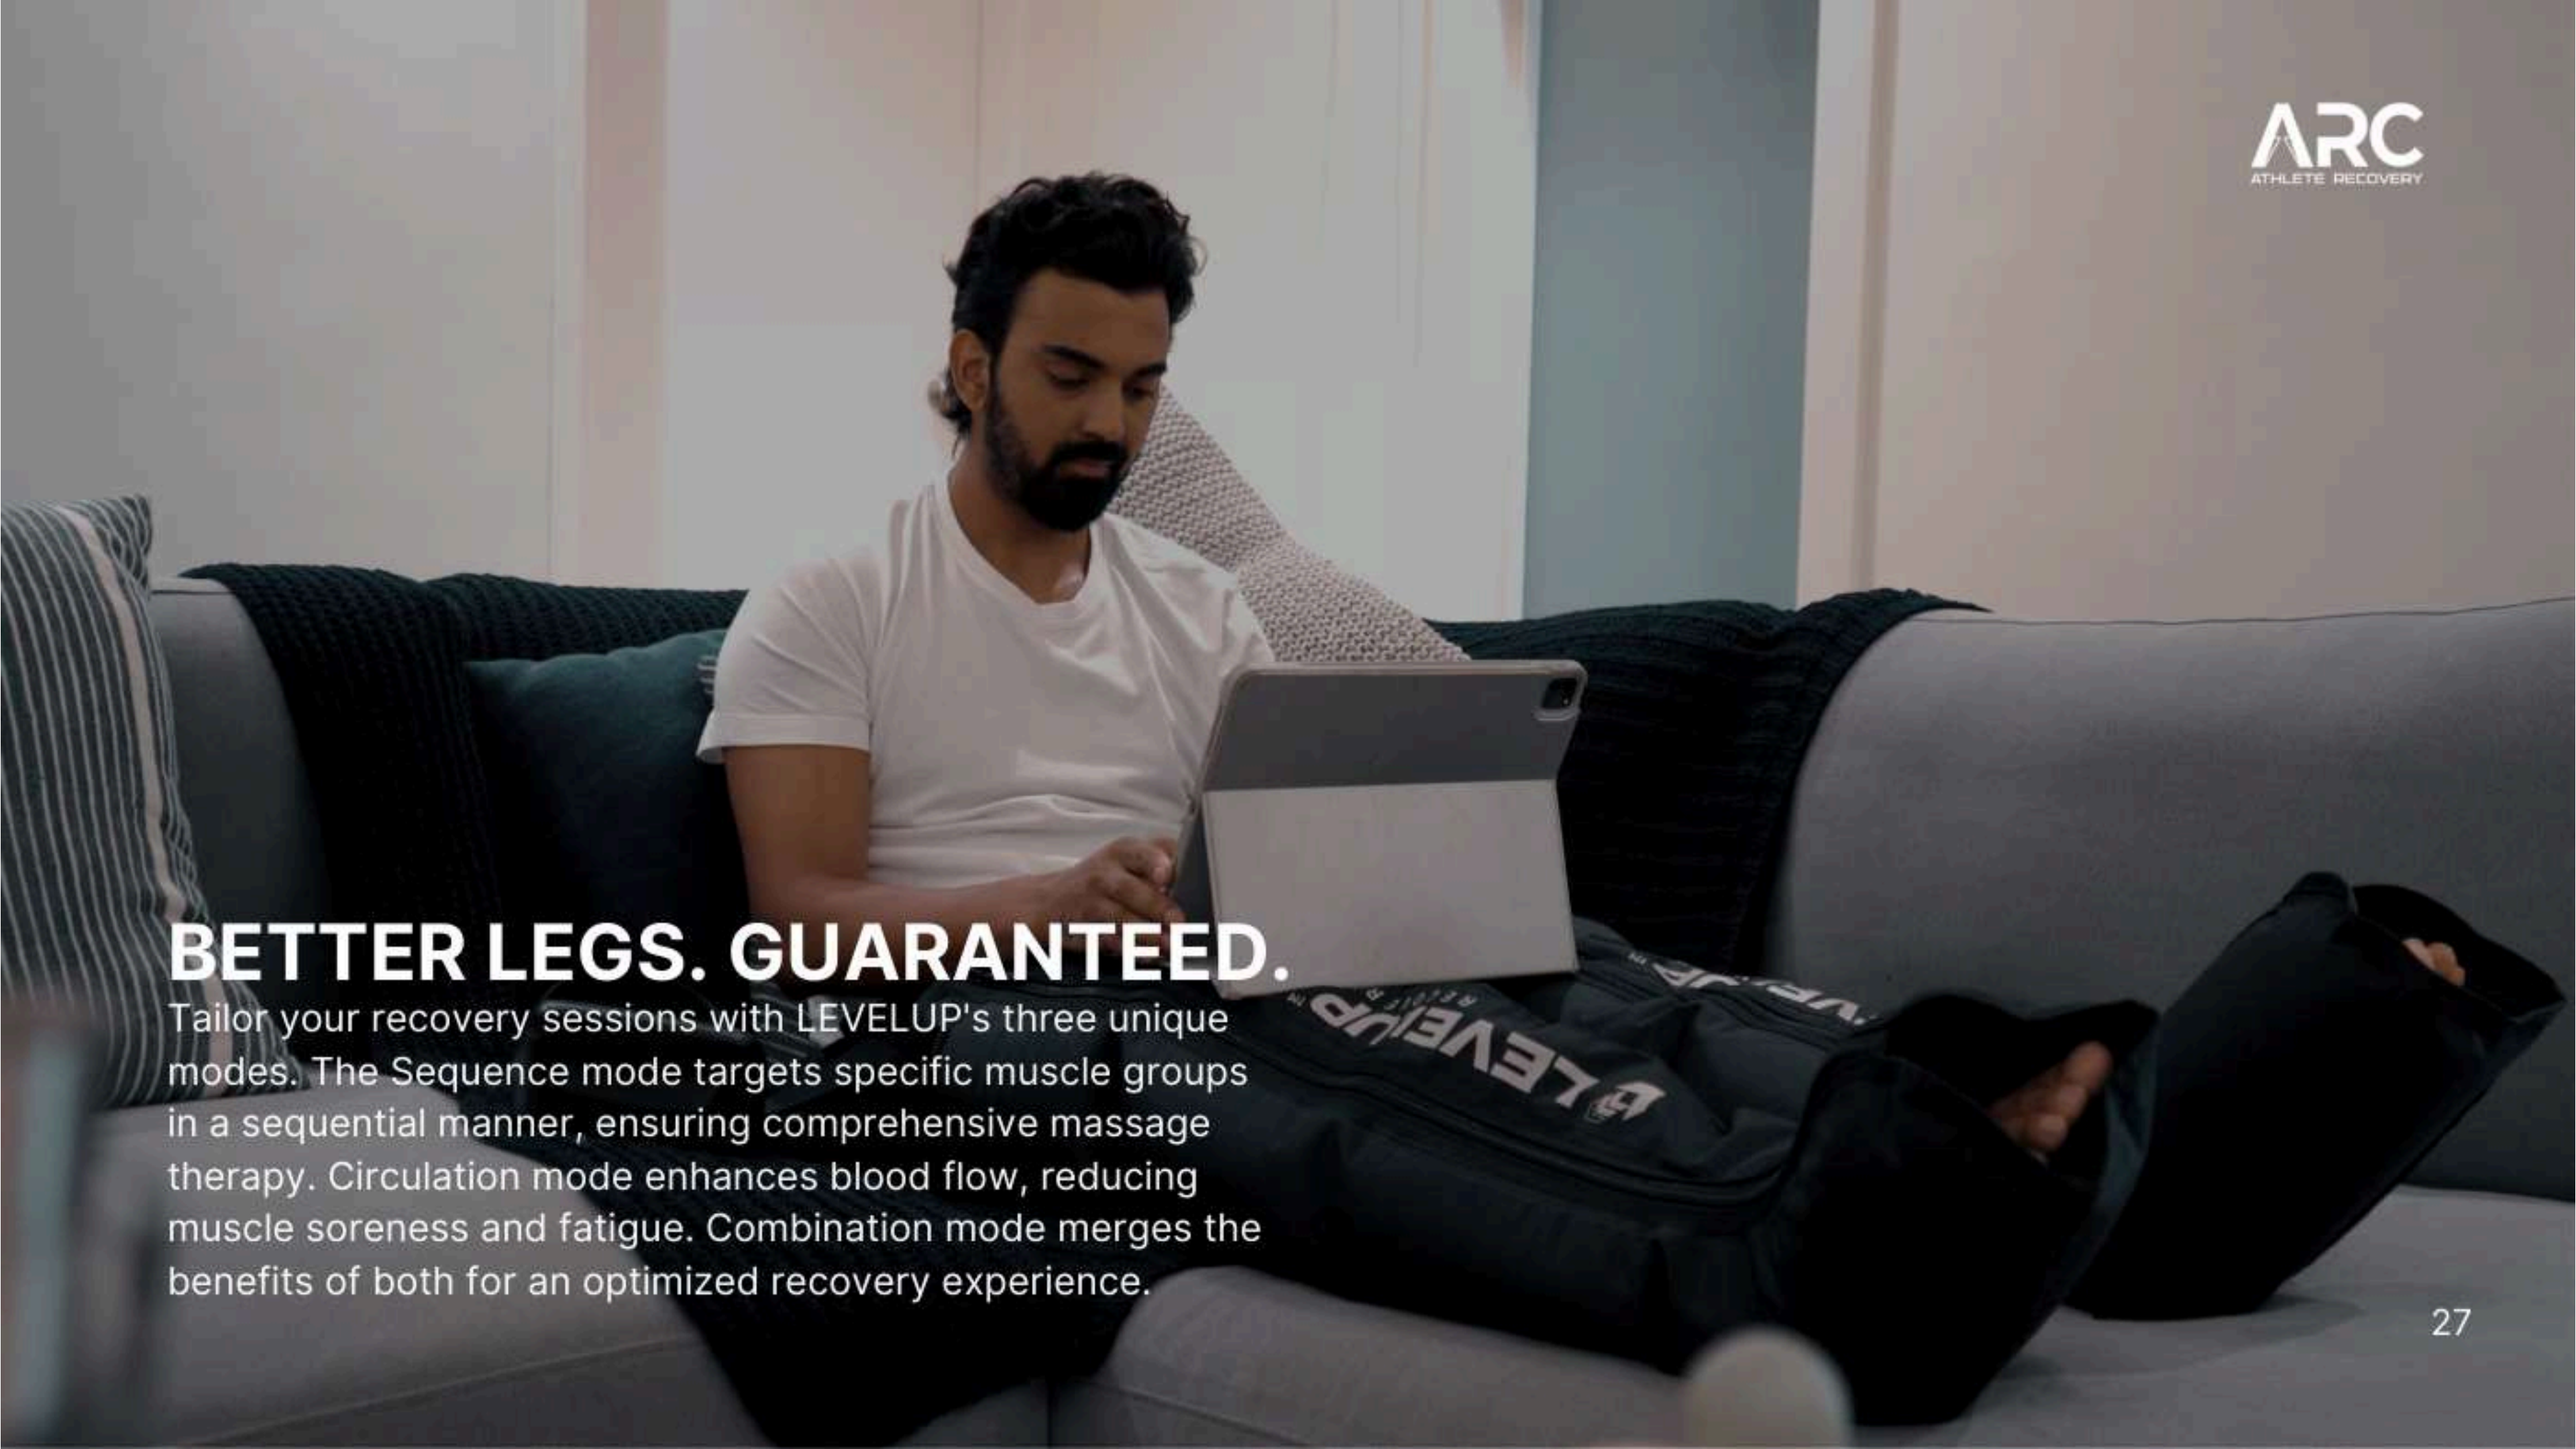

### How easy is it to switch between red, NIR, or combined mode?

The control panel allows seamless switching between red light (660nm), near-infrared (850nm), or both together—at the press of a button. There's also an integrated timer that can be set in 5-minute increments up to 30 minutes, making it effortless for guests or staff to manage sessions without supervision or external devices.

ARC
ATHLETE RECOVERY

LEVELUP™
RECOVERY

# DYNAMIC COMPRESSION | RECOVERY BOOTS | AIR LEG MASSAGE

# BETTER LEGS. GUARANTEED.

Tailor your recovery sessions with LEVELUP's three unique modes. The Sequence mode targets specific muscle groups in a sequential manner, ensuring comprehensive massage therapy. Circulation mode enhances blood flow, reducing muscle soreness and fatigue. Combination mode merges the benefits of both for an optimized recovery experience.

10. **Accessories**: 2 sleeves, console, charger, carry bag.

**MRP**: 54,999 INR

# Frequently Asked Questions

## LEVELUP RECOVERY BOOTS

### What are LEVELUP Recovery Boots?

LEVELUP Recovery Boots are advanced, portable compression boots designed to enhance muscle recovery, reduce soreness, and improve circulation through sequential compression technology.

### How do the LEVELUP Recovery Boots work?

The boots use air compression technology to apply pressure in a sequence, promoting blood flow and reducing muscle inflammation. This helps flush out metabolic waste and reduces recovery time after intense workouts or training.

### How intuitive is the digital console for first-time users?

The console is designed for plug-and-play simplicity. Clear on-screen prompts, mode selection, and pressure adjustment can be understood in seconds, no manual required. Ideal for unassisted use without compromising precision or control.

### How adjustable is the fit for different leg sizes and body types?

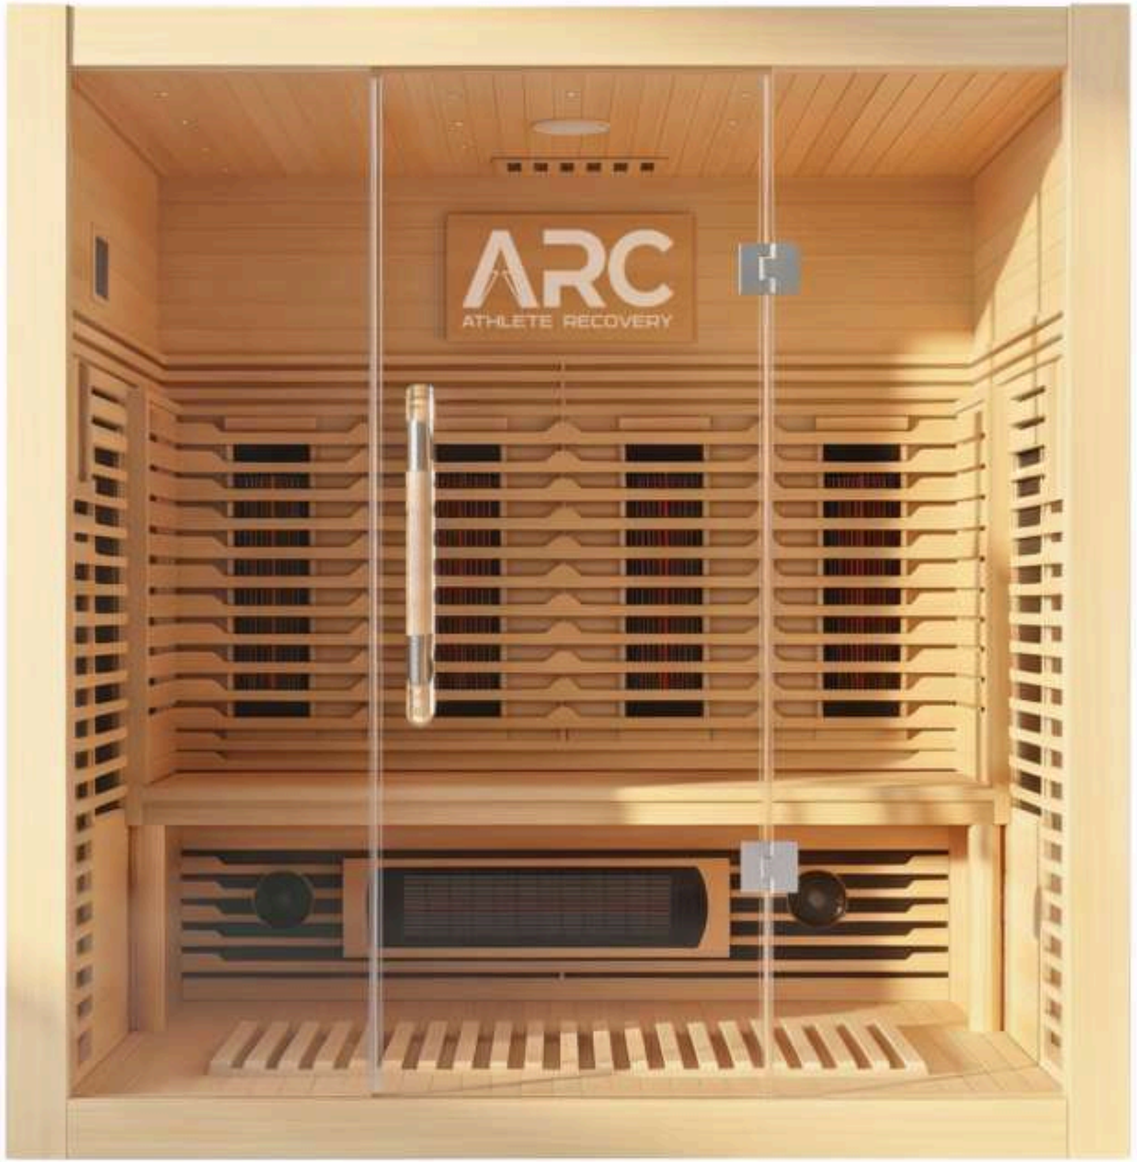

The sleeves are designed with flexible, wide-seal closures to fit a range of leg sizes. The ergonomic design ensures snug compression without discomfort, even across multiple users with varied limb lengths and girths.

### Are the boots hygienic and easy to clean between multiple users?

Yes. The sleeves are made from antimicrobial, breathable fabric that resists moisture buildup. They can be wiped down with standard disinfectant wipes between sessions. Internal lining materials are designed to withstand repeated sanitization.

# Frequently Asked Questions

## INFRARED SAUNA RANGE

### How does this compare to a traditional steam sauna in terms of heat and sweating?

Infrared saunas heat the body directly rather than the air, which means users sweat at lower ambient temperatures (~65–70°C). This is more comfortable for longer sessions and provides deeper tissue penetration without the discomfort of humid air.

### Is the tempered glass door heat-safe and secure during high-temp sessions?

Yes. The door is made from industrial-strength tempered glass with high thermal resistance and anti-shatter properties. The steel handle remains cool to the touch during operation.

### Are there lighting options to create different moods or therapeutic settings?

Yes. The unit includes built-in LED lighting with adjustable color modes, allowing users to select calming or energizing hues to enhance their session experience.

### How is Bluetooth music integrated and how loud is the speaker system?

The sauna includes a built-in Bluetooth receiver and discrete internal speakers. Sound is ambient and immersive—loud enough for personal listening, yet subtle enough not to disrupt a calm, meditative atmosphere.
